

ADR-001: OBA data pipeline via .viz files

****Status:****

Accepted

****Context:****

We need a pipeline to connect our webpage to the Oregon Bee Atlas database. The data is routinely updated with new observations and will have to be maintained by OBA staff once we finish our project.

****Decision:****

We will have an encoded .viz file that contains the current state of the database in our repository.

****Options:****

- Do Nothing
 - o Pros: Easy to do
 - o Cons: Won't have access to observation data
- .viz files uploaded to repo
 - o Pros: Mimics Melittaflora and achieves security criteria
 - o Cons: Will have to be manually maintained
- Replicate OBA data pipeline linking observations and iNaturalist data
 - o Pros: Autonomous, no maintenance needed
 - o Cons: Extremely difficult to replicate, time-consuming
- Upload raw excel file to repo
 - o Pros: Compatible with current python scripts
 - o Cons: Extremely rigid, short-term solution

****Rationale:****

The .viz files give the same level of security as the current Melittaflora webpage while being easiest to maintain long-term. It also mirrors the data setup of the Melittaflora webpage.

****Consequences:****

- When the page is loaded the .viz file will need to be parsed and converted to a JSON (takes about 1 second)
- The OBA staff will need access to where the .viz files are stored to update them routinely
- All scripts and querying will need access to parsed, locally stored, JSON created from .viz files

****References/Appendix:****

- Mirrored Melittaflora page: <https://oregon-bee-project.github.io/melittoflora/viz.html>

- Prototype page: <https://kellen-sullivan.github.io/bee-plant-data-exploration/>
- decode_viz.js script (in team github repo)

****Adoption and follow-through:****

Evidence of included files, location, and pull request that added them:

bee-plant-data-exploration / src / frontend / b-data /			Add file ▾	⋮
AlleZach Add accurate .viz files and general script to parse			95f3ef5 · last week	History
